

LORRIO — MASTER PROJECT BRIEF & REDESIGN BLUEPRINT

Mobile-First Application Architecture, WhatsApp Dispatch, GPS Tracking & Feature Specs

Founder: Alishan E A	UI Architecture: Mobile-First Native App
Target Corridor: Kannur ↔ Wayanad	Status: Redesigned & Deployed

1. Redesigned Mobile-First Features

- 1. Role Selection Landing Page:** Landing page welcoming users with 3 entry cards: Customer (I Need Material), Driver (I Have A Lorry), and Quarry Supplier (I Own A Quarry).
- 2. Interactive Google Maps Location Picker:** Customers select exact quarry pickup and Wayanad delivery site with GPS pin coordinates.
- 3. Interactive Price & Freight Estimator:** Move quantity slider (200 to 1,500 stones) and get real-time price calculations (Material + Lorry Freight + 2.5% Platform Fee).
- 4. Driver Delivery ETA Input:** Drivers set and update delivery ETA (e.g. 'ETA 04:30 PM (1 hr 35 mins)').
- 5. WhatsApp API Integration:** One-touch WhatsApp sharing link generating formatted order summaries containing lorry details, driver contact, ETA, total amount, and live tracking link.
- 6. Notification Center:** Real-time  Notification tab for Customers and Drivers.
- 7. Live GPS Tracking Map:** Interactive simulation of lorry moving along the Kannur ↔ Wayanad ghat pass route.

2. Strategic 4-Phase Roadmap

Phase	Target Focus	Milestones
Phase 1 (Active)	Kannur ↔ Wayanad	Mobile-first Laterite stone app, Location Picker, WhatsApp sharing, Return-Load Optimizer.
Phase 2	Regional Kerala	Kozhikode, Malappuram, Kasaragod; adding M-sand, aggregates, red bricks.
Phase 3	Automation	WhatsApp bot ordering, dynamic pricing algorithms, automated e-way bills.
Phase 4	Enterprise Hub	Pan-South India procurement hub & fleet management SaaS.
